
CS361 Assignment 5

Due Date
January 4, 2017

DJANGO DECORATORS

In this assignment, you are expected to improve the blog app you have written in the fourth assignment, based on the todo app provided for you.

Note: You should continue from the **fourth** assignment folder, which means that you should not create a new project or a new GitHub repository.

For this project, you are going to create a superuser area where only he/she can see all entries from all users. The url for this area is `"/blog/entries/all"`. Also you should show which entry belongs to which user. Then you should create another url for superuser where he/she can see all entries of a specific user. The url for this is `"/blog/entries/all/user/1"` where the last segment is the user id.

In order to create superuser you should write `"python manage.py createsuperuser"`

command to the terminal.

localhost:8000/todos/all/user/2

Welcome superuser [Logout](#)

1. **Go to the gym**

Do the workout b

+workout

written by: user2

After that, you should add the project and commit as "software assignment 5".

Note: In order to prevent plagiarism, you should push the project into GitHub after due date!! However you should still submit your code to LMS before due date.

In the end you should change your project name with your name_surname then zip it and submit before due date.

Note: You have to submit your code before due date, otherwise your project would not be accepted(even if it is pushed to GitHub).
